OVERVIEW

Toshiba-certified Headsets

Enjoy Handsfree Productivity While at Your Desk or Roaming the Workplace

Office workers, sales people, consultants and contact center agents—anybody who spends a lot of time on the phone—will be more comfortable, productive and mobile with a corded or wireless headset. Headsets bring freedom to work with your hands while talking on the phone...freedom to roam far from the communications device while staying connected...freedom to use the same headset on multiple devices.

Through a strategic alliance with Jabra, Authorized Toshiba Dealers deliver a wide range of headsets from the maker of the world's first digital wireless headset, first wireless headset, first serial-connected headset that supports unified communications, and the first *Bluetooth*® headset. Jabra is the global market leader in *Bluetooth* headsets.

These award-winning headsets are optimized for Toshiba *IPedge*®, *Strata*® *CIX*™ and *VIPedge*® phone systems—working with Toshiba digital and IP desktop phones, PC-based softphones and *Bluetooth*-enabled mobile phones and tablets.

The portfolio includes a broad choice of corded or wireless models at price points and feature sets to match each user's requirements.

For users who work at a desk, corded headsets enable multitasking while still talking handsfree. For those who prefer to be untethered, professional-grade wireless headsets make it simple, reliable and affordable to go wireless.

For those who spend a lot of time on the phone, there are light-weight designs, a choice of mono or duo speakers and ear plates/cushions, and three different wearing styles. Everybody can match their way of working for all-day comfort. Depending

on the model, power users can answer calls, adjust volume and mute the microphone from the headset or cord, via the computer or on a touch interface in a companion docking station.

For those who use multiple devices, software-based headsets seamlessly connect to traditional desk phones, softphones and *Bluetooth*-supported mobile devices. Grab the same headset no matter which phone is ringing, and control all three through the same touch screen interface.

For unified communications, choose from corded and wireless headsets certified to provide high-quality sound and handsfree operation with Toshiba's Call Manager applications. Users get an enhanced experience with audio integration, ring in the headset (with an adapter), answer/end calling integration and mute/volume control.

For employees on the move, *Bluetooth* or *Wi-Fi*®-friendly DECT wireless headsets enable you to roam 300 to 350 feet away from the desk while maintaining connectivity to all devices, with call control from the headset. Versatile headsets with triple connectivity make it easy to transfer calls to a mobile phone as you head out the door.

Assured audio quality

Advanced audio technology delivers crystal-clear sound even in moderately noisy environments. Noise-cancelling microphones and wind noise reduction offer enhanced sound and audio protection. For challenging environments, such as busy contact centers, you can further enhance audio quality with an audio processor for assured clarity and an optimal experience both for customers and employees.

Toshiba-certified headsets promote a safe, comfortable and more productive working environment.

TOSHIBA-CERTIFIED HEADSETS
